

ICREP-NTDs

International Collaborative Research Program for Tackling the NTDs (Neglected Tropical Diseases) Challenges in African countries

Objectives

NTDs are prevalent in 149 countries around the world and the number of NTD patients has reached 1.4 billion, nearly half of whom have been reported in Africa. Thus, NTDs are particularly rampant in Africa. The objective of this program is to use Japan's science and technology capabilities to enhance its contribution to addressing NTDs, which are serious impediments to the development of African countries that need to be addressed urgently, through strengthening the development of science and technology and human resources both in Japan and in emerging and developing African nations.

Program Structure

Ongoing Projects

■ Dengue

■ HIV, Trachoma, Schistosomiasis, Amoebiasis, Leishmaniasis, Lymphatic Filariasis, African Trypanosomiasis, Echinococcosis

■ Human African trypanosomiasis, Leprosy (Hansen disease)

* Nagasaki University is promoting the projects with these universities in four countries jointly.

General Description of the Project

Project period: FY2015 - FY2019

Project Title	Establishment of the model for controlling neglected tropical diseases based on the development of rapid diagnostic methods and risk analysis	
Summary	To control neglected tropical diseases in African continent, we will try to complete some items targeting leprosy and human African trypanosomiasis (HAT) as model diseases.	
Country	 Japan	 Zambia
PI	Dr. Yasuhiko Suzuki	Dr. Kennedy Choongo
Affiliation	Hokkaido University	The University of Zambia

Project Title	Integrated research program for the control of dengue fever mosquito in Burkina Faso, West Africa	
Summary	Integrated vector management (IVM) is defined as a rational decision-making process for the optimal use of resources for vector control.	
Country	 Japan	 Burkina Faso
PI	Dr. Hirotaka Kanuka	Dr. Athanase BADOLO
Affiliation	The Jikei University School of Medicine	Université de Ouagadougou

Project Title	An innovative continent-wide NTD surveillance network based on simultaneous multiplex assay technology in Africa	
Summary	This program intends to develop a continent wide NTD surveillance network based on a multiple assay system.	
Country	 Japan	 Kenya
PI	Dr. Satoshi Kaneko	Dr. Matilu Mwau
Affiliation	Nagasaki University	Kenya Medical Research Institute

※ PI: Principal Investigator
